- ✓ **Decreases severity and duration of cold and flu**
- ✓ **Helps relieve symptoms of chronic bronchitis**
- ✓ **Boosts essential antioxidant glutathione**
- ✓ **Reduce respiratory inflammation**
- ✓ **GMP Certified**

WHAT IS PHARMANAC[®]?

PharmaNAC is an advanced immune system booster, which utilizes the amino acid derivative of cysteine, N-acetylcysteine or "NAC" for short. NAC is the ingredient needed in the production of the essential antioxidant glutathione. Glutathione is an extremely important and powerful antioxidant produced by the body to help protect against free radical damage, and is a critical factor in supporting a healthy immune system.

BioAdvantex Pharma's unique high-quality preparation of pure NAC is patent protected and has been trusted and used by various members of the academic community in Phase 1 and Phase 2 clinical studies in the United States and Switzerland examining the role of NAC in supporting a healthy immune system and good respiratory function.

PharmaNAC is available as a 900mg effervescent tablet which dissolves quickly and easily in a glass of water allowing the active ingredients to be immediately absorbed upon drinking.

QUALITY ALERT!

NAC is an antioxidant that must be processed in an extremely dry environment with limited exposure to air. If it becomes oxidized to any degree, it becomes destabilized and may be therapeutically ineffective. This is precisely why BioAdvantex takes great care in diligently manufacturing PharmaNAC according to strict pharmaceutical standards. In fact, each PharmaNAC tablet is individually wrapped in a special 4-layer (paper/plastic/foil plastic) air-tight material to prevent moisture and air from destabilizing and degrading the NAC (unlike other NAC products that loosely package numerous quantities of NAC capsules in a plastic bottle openly exposed to air). Our European GMP-compliant manufacturing process secures consistent quality, content uniformity, and stability in each and every 900mg effervescent tablet.
